Text description provided by the architects. Is it possible to remodel a house by making a typological variation of it? This is what we explore in the project, following one rule: not to alter its exterior volume, but modifying the interior and the traditional program that classically define a single-family home in the most radical way possible.
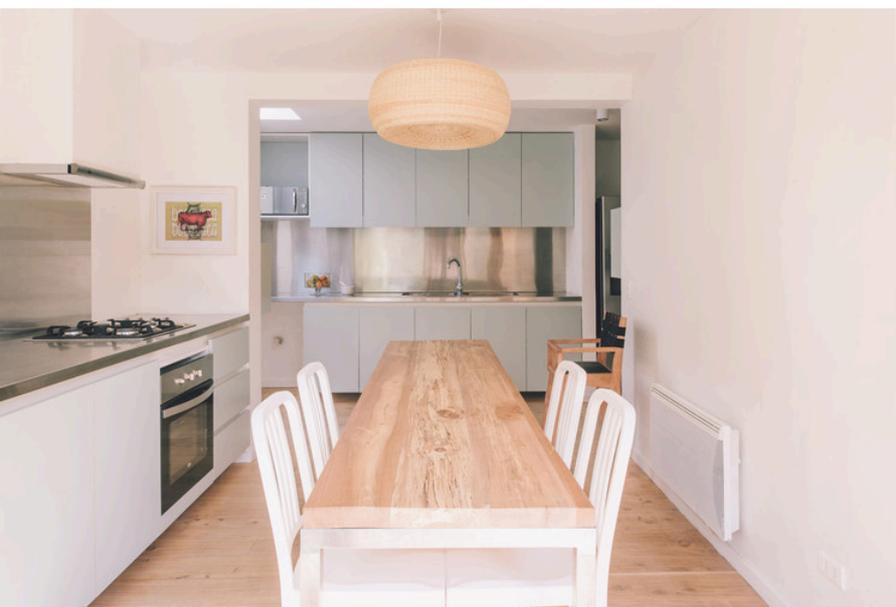

Kitchen, dining room, study and services are arranged on the

wood, trusses, a couple of pillars and a structural wall, resulting in a wide, open barn-type space. A single floor to ceiling separation was made, to isolate the master bedroom from the rest of the space.

The rest of the vertical parameters on the second floor were 2.4 meters high, made from panels that can be removed as the family changes. The barn-type open structure is not changed, only divided, so that the space on the second floor can mutate and acquire various uses: children can hang games on the beams; the roof of one of the bathrooms can be used as a new space to play or just to be appropriated by the children. Another significant change was the incorporation of natural lighting through overhead skylights, and to complement this

The materials and exterior volume were not touched, and the only things added were a terrace and a grill sector associated with the living room. The totality of the interior floor is wooded, including the kitchen and wet rooms, all walls are white or covered in wood and the bathrooms are clad in artisanal ceramic work.
